

'transformer positioning trick'**Author:** [Geert Jacobs](#) (guest:[search](#))**Date:** Thu, Aug 16th, 2001 @ 12:53 (12 years ago)

Hi,

When ordering a few transformers, the shop owner gave me nice tip on positioning them without getting any induced hum.

connect the primary of the pt to the mains and leave the secondary open. Connect headphones to the secondary of the OT and leave the primary open. Position both where you want to place them. If you hear some hum, start moving and turning the transformers around, until you find a quiet position.

Geert
