A Few Notes:

- This schematic is hierarchical. This is just the top sheet.
- This circuit diagram is not a factory schematic. It was derived from reverse engineering a real unit.
- It is attempted to be as accurate as possible. However, minor errors may be possible.
- If you think, in quite a few cases, "Hey, that's odd"... so did I.
- Don't shoot the messenger. Because you think something is odd does not mean I designed it that way. I did not design this unit.
- Just because you think it's odd does not mean it's wrong.
- All pots have European taper indication, meaning that A is Linear and B is logarithmic.
- You're correct. That's not a buffer, let alone a headphone amp.
- All jacks, except the front jack, have their bushing grounded on the case. Jep, hello groundloops and noise.
